✓ Professional Summary

I am a cybersecurity student with hands-on experience in SIEM deployment and SOC operations using Wazuh. I am skilled in log analysis, alert triage, Windows and Linux security monitoring, and incident investigation. Strong foundation in networking (CCNA), Python-based security tools, and blue-team practices. Actively seeking entry-level SOC Analyst or Cybersecurity Intern roles.

Secondary Education Examination (SEE) at Internation Lucky English School

2019 | Saptari, Nepal

Higher Secondary Education(12th) / HSE at Kantipur college

2022 | Biratnagar, Nepal

Completed 12th or HSE with a focus on Science Stream.

Bachelor of Technology in Computer Engineering (B. Tech (CE)) at RK University

Rajkot, India

Pursuing my degree with a focus on computer science.

Certifications

CCNA certification at Cisco

June 2024

Cybersecurity Analyst Job Simulation at TCS

August 2024

Cyber Job Simulation at Deloitte

August 2025

Cybersecurity Awareness: Cybersecurity Terminology at LinkedIn Learning

December 2024

The Cybersecurity Threat Landscape at LinkedIn Learning

December 2024

Skills

Technical Skills

- Python, Network Security
- Data Encryption
- Cryptography Fundamentals
- Network Protocols
- Packet Analysis
- Identity and Access Management (IAM)
- Linux, Windows
- Web Application Security
- Network Fundamentals
- SIEM Monitoring & Log Analysis

- Security Event Analysis (Windows & Linux)
- File Integrity Monitoring (FIM)
- MITRE ATT&CK Framework
- Virtualization (VirtualBox / VMware)
- Wazuh SIEM (Manager & Agent Configuration)
- Linux, Windows

Non-Technical Skills

- Team Skill
- Basic Communication
- Attention to Detail
- Adaptability
- Ethical Mindset
- Problem Solving
- Critical Thinking
- Time Management
- Collaboration
- Initiative
- Analytical Thinking

<> Projects

- **SIEM Security Monitoring & Incident Analysis using Wazuh:**

Designed and implemented a centralized Security Information and Event Management (SIEM) solution using Wazuh in a virtualized lab environment. Configured Wazuh Manager on Ubuntu and deployed Wazuh agents on Windows Server 2019 to collect and analyze security logs in real time. Integrated Windows Security Event Logs and Linux system logs to monitor authentication activities, detect brute-force attempts, and identify privilege escalation events. Performed alert triage, severity classification, and incident investigation using rule-based detection and MITRE ATT&CK mapping. Enabled real-time File Integrity Monitoring (FIM) to detect unauthorized changes to critical system files and documented investigation findings following SOC best practices.

- **SOC Alert Triage & Incident Response Simulation:**

Simulated real-world SOC operations by analyzing security alerts generated within the Wazuh SIEM environment. Classified alerts based on severity, impact, and likelihood, and performed detailed investigations into authentication failures, brute-force attempts, and suspicious system behavior. Documented incident timelines, investigation steps, and remediation actions following standard SOC workflows. Practiced identifying false positives and escalating high-severity incidents, gaining hands-on experience in Security Operations Center (SOC) processes.

- **SOC Alert Triage & Incident Response Simulation:**

Simulated real-world SOC operations by analyzing security alerts generated within the Wazuh SIEM environment. Classified alerts based on severity, impact, and likelihood, and performed detailed investigations into authentication failures, brute-force attempts, and suspicious system behavior. Documented incident timelines, investigation steps, and remediation actions following standard SOC workflows. Practiced identifying false positives and escalating high-severity incidents, gaining hands-on experience in Security Operations Center (SOC) processes.

- **Network Sniffer:**

Developed a Network Sniffer to capture and analyze real-time network traffic during the Code Alpha internship. Built a Python-based tool that intercepts and inspects packet data, identifying protocols and flagging suspicious activity, enhancing network security monitoring.

- **Caesar Cipher Encryption Tool:**

Developed a Caesar Cipher Converter using Python (Tkinter) with features like text encoding/decoding, swap, reset, and conversion history management, showcasing cryptography fundamentals.

- **Nmap Automation Tool:**

A powerful, feature-rich Nmap automation tool written in Python that simplifies network scanning while providing advanced capabilities like automatic NSE script execution, multiple output formats, and customizable scan profiles.
